DESIGNED FOR THE PROCEDURES YOU PERFORM.

StealthStation™ S8
Spinal Navigation

Medtronic

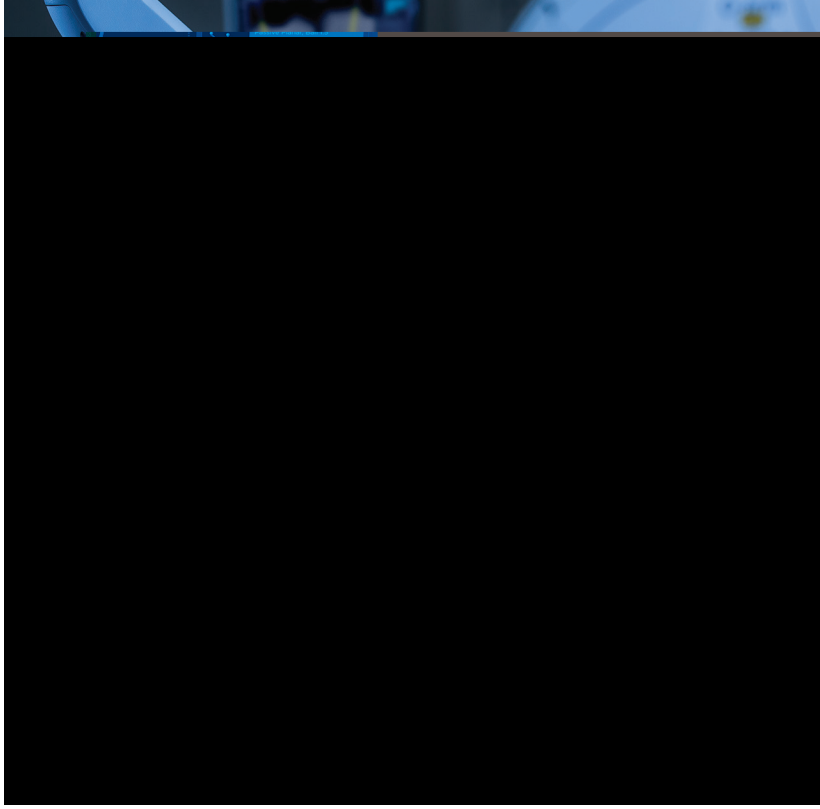
PROCEDURE FLEXIBILITY

FROM THE SINGLE-LEVEL PROCEDURE

You take into consideration the unique anatomy of each patient. Select the precise screw for each level and each side to achieve the best biomechanical fixation. Virtually save screw positions for streamlined rod placement. Intraoperatively plan access, osteotomies, and implant trajectory and position.

You have the option to save your procedures and preferences for greater consistency and speed.

Our open platform system provides compatibility with a variety of intraoperative imaging devices and implant platforms.



TO THE MOST COMPLEX*

Adopt advanced techniques and simplify instrumentation for challenging anatomy.

- **Cortical screw trajectory:** Assisted with real-time visualization.
- **Lateral access:** Viewing the patient's 3D anatomy in real time during your procedure means less time with tedious patient positioning.*
- **Percutaneous approaches:** Use virtual projections instead of guidewires for your percutaneous approaches.
- **Complex anatomy:** View three-dimensional real-time information when approaching the sacral ala, thoracic pedicles, deformed vertebrae, and the posterior cervical spine.*
- **Complex revisions:** With referencing built specifically for revision procedures, identify and access anatomy when traditional landmarks have been removed or damaged.*
- **Education and training:** Incorporation of navigation may improve surgical resident education.

OPTIMIZED SURGICAL ENVIRONMENT.

Our Stealth™ navigated workflows provide the opportunity to minimize radiation exposure to surgeons and OR staff, providing an efficient and more comfortable environment for your team.

You provide the best care for your patients, and we are your partner. Numerous published clinical articles demonstrate improved accuracy in pedicle screw placement with navigation. This means optimized surgery for your patients, and peace of mind for you.
